product description

The Z-KIT is considered a “starter” kit, providing the basic tools for personal defense and facilitate survival following a global zombie pandemic. Easily accessible in any residence or workplace, the content allows its user to confidently scavenge the post-apocalyptic neighborhood for better weapons, more food and stronger fortifications. There’s a small stock of finished kits currently available.

history:

By definition, an emergency survival kit is a collection of supplies to aid in the survival of a disaster or emergency situation such as hurricanes, earthquakes, and other natural disasters. A good emergency survival kit contains tools to provide the basic survival necessities such as shelter, food, water, and first aid. This kit is specifically designed and prepared for a class 4 (global epidemic resulting in complete breakdown of government) zombie outbreak.

The Z-KIT’s utilitarian purpose is complimented by a fine locally hand crafted display case (includes mounting hardware). The high quality, poplar wood case is available in 2 stains; dark or cherry, and lined in 5 color options; black, blue, green, red and white. The kit is finished with a glass front-facing display window from a local glass business, and hand stenciled, in 2 colors, reading: ZOMBIE OUTBREAK FIRST RESPONSE KIT (red), BREAK GLASS IN CASE OF EPIDEMIC (white). When not in use during a living dead uprising, the Z-KIT adds the finishing touch to any man cave.
